

ABSTRACT

There is provided a side airbag for an automobile having airbag modules 100, 200, 300, which selectively includes reinforcing pads, an inner cushion pad, a tube-type tether
5 and a tear seam, all of which are piled in multi-layers, so that the side airbag may be developed with regulating the gas pressure duration without eccentricity, in a useful and effective manner to successfully protect a driver and passengers seated in the vehicle.
The cushion pads used in the side airbag require a small amount of materials, are easily
seamed and easily folded, so as to reduce costs.
